MARKET RESEARCH SNAPSHOT · OCTOBER 2026

Protein, Fibre & Nutraceuticals in E-commerce

How online channels, creator commerce and new consumer habits are reshaping three of the fastest-moving categories in health & wellness, with market data, consumer statistics and five brand case studies.

Protein | Fibre | Nutraceuticals

$74.2B

US supplement sales in 2025, with e-commerce at 24.3% of the total

70%

of Americans say they are trying to consume protein (2025)

$784M

supplement sales on TikTok Shop in one year, its #1 health & beauty category

Compiled from public market research, trade press and company disclosures. Sources on page 10.

01 · EXECUTIVE SUMMARY

The short version

24.3%
E-commerce share of US supplement sales in 2025, up from ~10% in 2019 [1,2]

64%
of Americans trying to eat more fibre in 2025, up from 54% a year earlier [6]

~9.5%
Projected CAGR for online nutraceutical sales, ahead of ~7.6% for the market overall [4]

23%
of US households include a GLP-1 user, a group seeking more protein and fibre [8]

Five things to know

01 **Online is becoming the main supplement channel.** In the US, e-commerce was the fastest-growing supplement channel in 2024 (+10.7%) and is expected to become the largest channel within the next few years. NBJ projects it will lead by 2028, and New Hope commentary suggests it could happen as early as 2026.

02 **Protein has gone mainstream.** Protein is the nutrient consumers most often say they are trying to get more of. The global protein-supplement market is roughly **$28–30B**, and powders make up nearly half of it.

03 **Fibre is the next protein.** Only about 5% of Americans meet fibre recommendations, yet interest jumped 10 points in a single year. Prebiotic sodas (Olipop at $400M+ revenue; Poppi sold to PepsiCo for $1.95B) show how quickly a fibre format can scale.

04 **Discovery has moved to creators and marketplaces.** Supplements are TikTok Shop's largest health & beauty category, and Amazon remains the default shelf. In India, quick commerce now makes up almost half of HealthKart's e-commerce sales.

05 **The winners use both online and retail.** Brands that started online (Huel, AG1) grew into profitable businesses by adding subscriptions and then retail. Myprotein's 2024 decline in online sales shows the risk of depending on one channel.

Category scorecard

CATEGORY	GLOBAL SIZE (2025)	CONSUMER MOMENTUM	E-COMMERCE FIT	HOTTEST ONLINE FORMAT
Protein	**$28–30B**	Very high, but levelling off (70%)	High: repeat purchase, bulky	Powders, RTD shakes, protein snacks
Fibre	**≈$3.7B**	Rising fastest (+10 pts in a year)	High: daily habit, creator-led	Gummies, prebiotic sodas, GLP-1 support
Nutraceuticals	**$480–525B**	Steady (5–8% CAGR)	High: online CAGR ~9.5%	Greens powders, subscriptions, social commerce

How to read the numbers. Market-research firms define these categories differently, so estimates for the same market can differ by 2–5×. Wherever sources disagree, this report gives a range and names the publishers. Company figures for private firms (AG1, Olipop) are company-reported or press-reported and have not been audited.

02 · MARKET AT A GLANCE

A big market that is growing steadily

Each category is growing in the mid-to-high single digits, and online sales are growing faster than the market overall.

MARKET (2025)	SIZE	GROWTH	SOURCE(S)
Global nutraceuticals	**$480–525B**	≈5–8%	GMI, Straits, Roots Analysis, Ken Research
Global protein supplements	**$28–30B**	—	Grand View, Mordor, IMARC, Ken Research
Global fibre supplements	**≈$3.7B**	≈6.7% to 2032	LP Information ($5.8B by 2032)
Global dietary fibres (ingredients)	**$10.5B**	7.9% to 2035	Global Market Insights
US dietary supplements	**$74.2B**	+7.1% in 2025	Nutrition Business Journal
India nutraceuticals	**$8.9–34.5B**	≈11–12%	IMARC, Ken Research
India protein supplements	**$913M**	6.3% to 2034	IMARC

Online is outgrowing the nutraceutical market

Forecast CAGR, global nutraceuticals, 2026–2034

Source: Straits Research.

North America is the largest protein market

Share of global protein-supplement revenue, 2025

Source: Ken Research. Powders make up 48.8% of the category (Grand View).

Four forces behind the growth

GLP-1 medications

23% of US households include a user. They want more protein and fibre in smaller portions.

Social commerce

TikTok Shop, creators and podcasts now drive product discovery and are speeding up the move online.

Quick commerce

10-minute delivery in India makes supplements an impulse buy as well as a planned purchase.

Preventive health

Healthy ageing, gut health and weight management bring in buyers who aren't athletes.

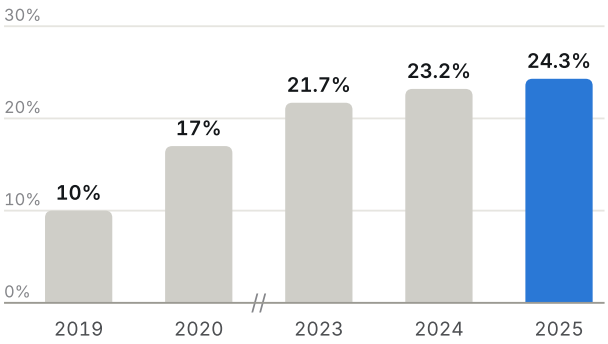

Why the ranges are so wide. One publisher's "nutraceuticals" includes functional foods and beverages, while another counts only supplements. India estimates vary almost fourfold for this reason. For planning, compare growth rates and channel trends, which agree much more closely across sources than headline totals do.

The online shelf is becoming the main shelf

COVID-19 rapidly increased online supplement buying, and the shift has continued since. The main drivers now are marketplaces, subscriptions and creator-led social commerce.

E-commerce share of US supplement sales

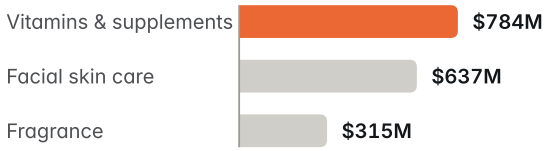

% of total US dietary-supplement sales (2021–22 not reported in sources)

Sources: NBJ via L.E.K. (2019–20); NBJ via Nutraceuticals World / New Hope (2023–25).

Supplements lead TikTok Shop's health & beauty sales

TikTok Shop US sales, 52 weeks to Feb 2026

Supplement sales on the platform grew **11.0%**, compared with 8.4% for health & beauty overall. Two of the top three TikTok Shop products in April 2025 were functional drinks.

Sources: NielsenIQ via NutraIngredients; Kalodata via Chinesellers.

Where US supplement dollars were spent in 2024

Channel share of $69.3B total sales. E-commerce grew fastest, at +10.7%.

27%	23.2%	12%	37.8%
Mass market	E-commerce	MLM / network	Natural, specialty, practitioner & other

17%
e-commerce share in 2020, when COVID-19 nearly doubled it from about 10%

+10.7%
e-commerce growth in 2024, the fastest of any US supplement channel

~$18B
implied US online supplement sales in 2025 (24.3% × $74.2B)

Amazon is still the default shelf

- Vitamin and supplement sales on Amazon were tracking above **$10B a year** as early as 2022 (SPINS / ClearCut).
- Sports nutrition and VMS led Amazon's category growth in mid-2025 (Pattern).
- Omega-3 alone is an estimated **$674M** category on Amazon US, growing 18% a year (GOED).

Social commerce is speeding up the shift

- New Hope / NBJ commentary credits **TikTok Shop** with bringing forward the year online becomes the #1 channel from 2028 to as early as 2026.
- Health brands such as MaryRuth's and Micro Ingredients rank among the platform's top sellers.
- Short video suits "before and after" stories, taste tests and routines, all of which are central to supplement marketing.

04 · PROTEIN

Protein everywhere

Protein used to be a niche product for gym-goers. It is now an everyday nutrient that shoppers seek out across supplements, drinks and snacks.

$28–30B
Global protein-supplement market, 2025 [3]

48.8%
Share of the category held by protein powder [3]

37–38%
Reported online share of protein purchases, the largest channel* [3]

$913M
India protein-supplement market, 2025 (IMARC) [11]

What is driving demand

- **A nutrient everyone wants.** 70% of Americans said they were trying to consume protein in 2025 (71% in 2024). No other nutrient ranked higher in IFIC's survey.
- **GLP-1 medications.** Circana estimates that 23% of US households include a GLP-1 user. These shoppers look for higher-protein and higher-fibre products to protect muscle mass while eating less.
- **"Proteinification".** Protein is moving beyond tubs of powder into ready-to-drink shakes, snacks and fortified everyday foods. In India this trend is accelerating through quick commerce.
- **Beyond the gym.** Healthy ageing, weight management and women's health now drive demand alongside bodybuilders.

Why protein suits e-commerce

- **Repeat purchase.** A 1–2 kg tub runs out on a predictable schedule, which makes subscribe-and-save models a natural fit.
- **Heavy, bulky products.** Delivery to the door is more convenient than carrying big tubs home, and online stores can offer the large sizes that physical shelves have no room for.
- **Comparison shopping.** Shoppers compare price per gram of protein, ingredient lists and third-party test results, all of which are easy to show online.
- **Flavour drops and bundles.** New flavours and limited editions drive sales and work well for creator content and email marketing.

*The online-share figure comes from one secondary summary of Mordor Intelligence data and has not been independently verified.

How shoppers buy protein online

A typical path from discovery to repeat purchase, based on the channels and case studies in this report

01 **Discover** — TikTok, podcasts, fitness creators → 02 **Compare** — Amazon reviews, price per gram, lab tests → 03 **Try** — Sachets, trial packs, quick commerce → 04 **Subscribe** — D2C subscribe & save, flavour bundles → 05 **Advocate** — Reviews, referrals, creator codes

Watch-out: Interest in protein is high, but consumers' knowledge is low. Trade coverage of IFIC research notes that most Americans misjudge how much protein they need. Brands that explain dosing clearly, with tools like "grams per meal" calculators, earn trust online.

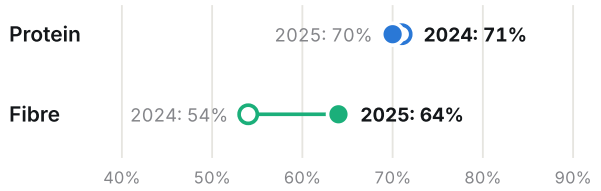

05 · FIBRE

Fibre is catching up with protein

Interest in fibre jumped 10 points in a year while protein held steady. The gap between what people want and what they actually eat is a big opportunity.

Share of Americans trying to consume…

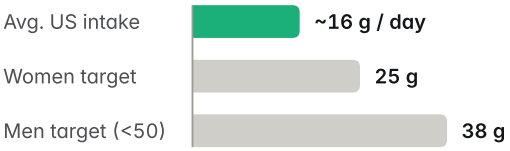

IFIC Food & Health Survey, 2024 → 2025

Source: IFIC via Nutritional Outlook and trade press.

The fibre gap

Average daily intake vs. Institute of Medicine reference values

About **95%** of US adults and children fall short of recommended fibre intake (2016 estimate based on NHANES data). An IFIC survey in October 2025 found fewer than 10% of women and 3% of men meet the recommendation.

≈$3.7B
Global fibre supplements in 2025, forecast to reach $5.8B by 2032 [7]

$10.5B
Global dietary-fibre ingredients market, growing 7.9% a year [7]

$400M+
Olipop revenue in 2024, roughly double 2023 [14]

$1.95B
PepsiCo's acquisition of prebiotic soda brand Poppi [14]

The "fibermaxxing" moment

"Fibermaxxing", a social-media trend of deliberately loading meals with fibre, has turned a nutrient once marketed for regularity into a lifestyle choice. Gut health, blood-sugar control and feeling full on GLP-1 medications are the main hooks. Trade press now regularly asks whether fibre will overtake protein as the top nutrient trend.

What this means online

- Established brands still lead on Amazon. Metamucil, Benefiber and Amazon Basics fibre gummies top the third-party sales rankings.
- Gummies and flavoured powders are taking share from capsules and plain psyllium.
- Fibre added to familiar products (sodas, bars, protein shakes) is the fastest way to reach consumers who don't buy supplements.

Fibre formats, from traditional to new

Psyllium powder
The traditional format, now losing share to easier options

Capsules
Convenient but need a high pill count

Gummies
Fastest-growing listings on Amazon

Prebiotic drinks
Olipop and Poppi brought fibre into soda

GLP-1 companions
Fibre and protein blends for GLP-1 users

Big-company signal: Nestlé Health Science launched GLP-1Nutrition.com in June 2024, an online store that features fibre supplements and prebiotics for people on weight-loss medication. Alongside PepsiCo's purchase of Poppi, it shows that major food companies are betting on fibre, with online sales as a key channel.

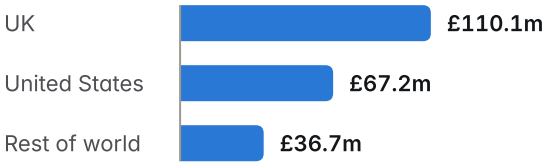

Brands that started online and scaled

PROTEIN · COMPLETE NUTRITION

Huel

UK · founded 2015

Revenue by region, FY2024 (£m, year to July 2024)

£214m	£13.8m	59%	25,000+
revenue, +16%	pre-tax profit (from £4.7m)	gross margin	retail doors (from 11,250)

Playbook: Huel built its business on direct-to-consumer subscriptions for powdered meals and protein shakes, then expanded quickly into supermarkets and convenience stores. Adding retail improved profitability without hurting online sales. In March 2026, Danone reportedly agreed to acquire the company.

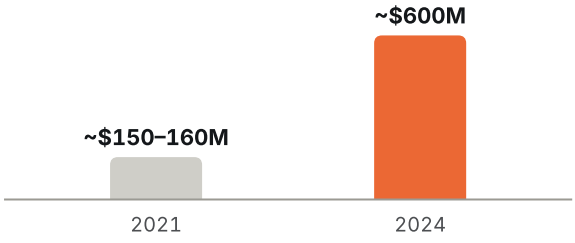

Lesson: use direct-to-consumer sales to build the brand and gather customer data, then expand into retail.

NUTRACEUTICAL · GREENS POWDER

AG1 (Athletic Greens)

Founded 2010

Annual revenue ($m)

2024 figure is the company's own projection (Fortune); independent estimates are lower ($350–450M).

~4×	$79	1	2025
revenue growth, 2021–24	monthly subscription price (vs $99 one-off)	hero product	entry into Costco

Playbook: AG1 sells one product, "one scoop a day", mainly through a subscription on its own website. It priced the subscription below the one-off purchase to reward commitment. Heavy podcast and creator sponsorships drove discovery. In 2025 it began expanding into new products (AGZ sleep drink, Next Gen formula) and into retail.

Lesson: a single product sold by subscription, marketed through trusted voices, can reach very large scale.

Side by side

	HUEL	AG1
Hero product	Complete-nutrition powder and RTD shakes (protein-rich)	Daily greens powder (vitamins, minerals, whole-food ingredients)
Main growth engine	D2C subscription, then fast expansion into retail	D2C subscription with podcast and creator sponsorships
Retail move	25,000+ doors by FY24	Costco and other retail from 2025
Outcome	Profitable; reportedly being acquired by Danone (2026)	~$600M projected revenue, profitable (company-reported)

Fibre's breakout, India's leader, and a warning

FIBRE · PREBIOTIC SODA

Olipop US · founded 2018

Annual revenue ($m)

2×	$1.85B	$200M	Profitable
revenue in one year	valuation, Feb 2025	valuation in 2022	since early 2024

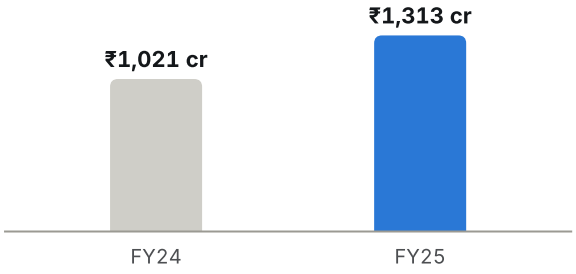

Playbook: Olipop packaged a high-fibre, gut-health product as a familiar treat: soda. Consumers who would never buy a fibre supplement bought it anyway. Coca-Cola and PepsiCo both approached Olipop about an acquisition. PepsiCo ended up buying rival Poppi for $1.95B, which confirmed the category's value.

Lesson: fibre sells best when it comes in a familiar, enjoyable format.

PROTEIN & NUTRACEUTICALS · INDIA

HealthKart (MuscleBlaze) India · founded 2011

Operating revenue (₹ crore)

+29%	~₹120 cr	200+	~50%
revenue growth	net profit (3×)*	stores in 90+ cities	of e-commerce sales via quick commerce

Playbook: HealthKart is a digital-first house of brands (MuscleBlaze, HK Vitals, TrueBasics and others) that makes its own products. It added physical stores and moved quickly onto 10-minute delivery apps (Blinkit, Swiggy Instamart, Zepto). Quick commerce now accounts for almost half of its online sales.

Lesson: in India, the online shelf increasingly means 10-minute delivery apps. *FY25 profit includes a deferred-tax credit of about ₹31 cr.

CAUTIONARY TALE · SPORTS NUTRITION

Myprotein (THG Nutrition) UK

What happened: Myprotein is one of the world's largest online-first sports-nutrition brands. Its revenue fell **12%** in 2024, which THG attributed to **weaker online sales**, disruption from a rebrand, and weaker-than-expected results in Asia. Since then the company has leaned into retail partnerships and offline distribution to win back growth.

Lesson: depending on a single online channel is risky. Price competition on marketplaces, rising acquisition costs and a rebrand can all hit at the same time. Spreading sales across channels makes a brand more resilient.

07 · PLAYBOOK

What works online in these categories

Common patterns from the data and case studies in this report.

Subscribe & save as standard

Protein, fibre and daily nutraceuticals all run out on a predictable schedule. Price the subscription below the one-off purchase (as AG1 does, $79 vs $99) and make it easy to skip or pause.

Creator- and social-led discovery

Supplements are TikTok Shop's top health & beauty category. Podcasts, short video and affiliate creators now do much of what in-store discovery used to do.

Win the marketplace search

Amazon remains the default online shelf. Product-page content, reviews, the right pack sizes and protecting prices against unauthorised resellers matter as much as advertising.

Quick commerce in India and Asia

10-minute delivery apps make up almost half of HealthKart's e-commerce sales. Design single-serve and trial packs for impulse buying.

Familiar formats

Fibre in soda (Olipop) and protein in coffee, snacks and RTDs. Putting the nutrient into something people already buy reaches beyond supplement shoppers.

Build trust with evidence

Third-party testing, clear dosing and claims that comply with local regulations (FDA/DSHEA in the US, FSSAI in India) set credible brands apart from look-alike products.

Channel fit by category

our assessment based on the evidence in this report

CHANNEL	PROTEIN	FIBRE	NUTRACEUTICALS	WHY IT MATTERS
Amazon / marketplaces	●●● High	●●● High	●●● High	The default place to search and compare; reviews drive conversion
D2C website + subscription	●●● High	●●○ Medium	●●● High	Higher margin, customer data and recurring revenue (Huel, AG1)
Social commerce (TikTok Shop)	●●○ Medium	●●● High	●●● High	Supplements are TikTok Shop's #1 H&B category; trend-driven
Quick commerce (India)	●●● High	●●○ Medium	●●○ Medium	~50% of HealthKart's e-commerce sales; impulse and top-up buys
Physical retail	●●○ Medium	●●● High	●●○ Medium	Lets online brands scale up later (Huel's 25k doors, AG1 in Costco)

Opportunities

- Products designed for GLP-1 users (protein + fibre combinations, smaller portions)
- Fibre gummies, flavoured powders and prebiotic drinks
- Nutrition for women, healthy ageing and the gut–brain link
- Bundles that combine protein and fibre ("complete the formula")
- Moving from online-only into selected retail once demand is proven

Risks

- Rising customer-acquisition costs on paid social
- Price competition and counterfeits on marketplaces
- Regulatory scrutiny of health claims and influencer disclosures
- Trends that fade quickly (social-media "maxxing" cycles)
- Depending on one channel (see Myprotein)
